

I am hard of hearing, and even with my hearing aids and assistive listening devices I cannot fully understand what is said on TV. CAPTIONING MAKES ALL THE DIFFERENCE FOR ME!

The obvious problem is that not enough programs are captioned, ESPECIALLY on our local Connecticut channels.

Captioning is actually beneficial for, and at times desired by, even most people with good hearing. So it is actually in the long term best interests of the broadcast industry to promote it. But most business people only think in terms of short term income and expenses, so it is critical that the FCC act in everyone's best interest by making all stations reach 100% captioning as quickly as possible. Thank you.
